This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

OFFICE OF THE BUREAU OF VITAL STATISTICS,

CAPITOL, HARTFORD, Oct. 1, 1914.

To His Excellency, SIMEON E. BALDWIN, *Governor of the State of Connecticut:*

SIR:—In compliance with the laws of the State, I have the honor to present to you the sixty-sixth report, relating to the births, marriages, divorces and deaths that were registered in Connecticut in the year 1913.

Very respectfully,

JOSEPH H. TOWNSEND, M. D.,
Secretary of the State Board of Health,
and Superintendent of the Registration of Vital Statistics.

Digitized by Google

REGISTRATION REPORT, 1913.

The present registration report is the sixty-sixth annual compilation of births, marriages and deaths registered in Connecticut during the calendar year 1913. The first report was for the year 1848 and, with the exception of 1852, reports have appeared each year since. Prior to the organization of the State Board of Health, and the making of this Board the State Bureau of Vital Statistics, they were published first from the office of the Secretary of State and later by the State Librarian.

The population must be known in order to study vital statistics. There is no way of knowing the exact population of a state or town except by actual count and this is only done once in ten years. For non-census years statistical tables are based upon an estimated population and the chief methods employed by statistical experts in estimating population are those known as the geometrical and arithmetical methods. The geometrical method assumes a constant rate of increase between census years, or an increase in proportion to the population, while the arithmetical method assumes a constant amount of increase between census years. It is the latter method that is used in making the rates found in this report. The total increase of population from one census to the next is divided by the number of years between censuses and the resulting average annual increase is added from year to year to give the estimated population.

BIRTHS.

The registered births during the year numbered 30,122, which is 1,083 in excess of those reported the previous year and represents a birth rate of 25.6 per 1,000 population. The registration of births presents greater difficulties than that of either deaths or marriages, and no city or state claims complete birth registration. The census of 1910 showed that of the states, only the six New England states, Pennsylvania and Michigan had an approximately

Digitized by Google

complete birth registration. The essential burial permit and marriage license tends to completeness of death and marriage records, but in the case of births there is no such ready check on the enforcement of the law. Physicians and midwives are required to report all births coming under their care, but unfortunately there are instances where no professional attendant is employed and a certificate of birth is not returned. Birth registration is of the utmost importance in all questions relating to heredity, property rights and identity. No child labor law is of value unless it rests on a system of birth registration by which the child and the parent can be required to produce positive proof of the age of the child. Laws cannot be enforced where the question of age depends on the statement of interested parties rather than on official records.

MARRIAGES.

There were 12,537 marriages during the year 1913. This was 307 more than in the previous year. October 1, 1913, a law went into effect requiring all persons not residents of the state to give five days' notice to the registrar before receiving a license to marry. This will result in fewer marriages of persons from neighboring states where there has been a similar law for some time.

DEATHS.

The deaths in the State numbered 17,722, equivalent to a death-rate of 15 per thousand of population. This is 407 deaths more than last year when the death rate was 14.9 per thousand population. The death-rates given in this report are what is known as crude death rates and are based upon the comparison of total deaths with the aggregate population. Our death rate of 15 per thousand has been corrected by the U. S. Census Bureau for age and sex distribution to 14.4 per thousand. This means that death rates vary with the character of the population and each element has its relation to the rate of mortality and therefore for comparison with other States or Countries the make-up of the population must be considered. The death rate per thousand males is practically always higher than the death rate per thousand females. Hence a State having a relatively larger female population than another will normally show a lower death rate and a community where the very young or old predominate will show a higher rate

Digitized by Google

than a community made up largely of young adults. Rates will also vary with the color and nationality of the inhabitants, as death rates are unfavorably affected by a large foreign-born population, living in crowded tenements and under unsanitary conditions.

The Census Bureau takes the population of England and Wales as the standard for comparison and the corrected death rates are the rates that would have resulted at the various age groups if the sex and age of the population in the State had been identical with that of the population of England and Wales at the last census.

The rates given in this report as well as those in all the preceding registration reports are based on the inclusion of all deaths, both resident and non-resident occurring in each town. Deaths in the asylums for the insane and in other state institutions are enumerated with those of the town where they are located and no plan has yet been devised for charging non-residents back to the towns from which they come. Tuberculosis death rates in our cities have decreased since the establishment of our State sanatoria, for the reason that many of these cases go to the State institutions. The growing popularity of our city hospitals have also affected local statistics. Many victims of typhoid fever who contract the disease in the country are carried to our city hospitals and some die there. This requires their deaths to be recorded in the city where they die. Obviously there is an injustice which is especially apparent in some instances.

The following table shows how non-resident deaths in Hospitals has affected the typhoid death rates in the six largest cities of the State.

	Estimated Population	Deaths from Typhoid Fever			Death Rates	
		Resident	Non-Resident	Total	All Cases	Residents Only
New Haven..	141,278	18	0	18	12.7	12.7
Bridgeport..	111,371	6	1	7	6.2	5.3
Hartford....	104,634	12	12	24	22.9	11.4
Waterbury..	79,741	7	4	11	13.7	8.7
New Britain.	48,630	2	0	2	4.1	4.1
Meriden....	33,077	4	1	5	15.1	12.0

There were 298 deaths from tuberculosis in the four State sanatoria, the table below shows how the tuberculosis death rates

Digitized by Google

in the five largest cities of the State are influenced by these State institutions.

	Deaths from Tuberculosis			Death Rates per 100,000	
	At Home	State Sanatoria	Total	Home Cases	All Cases
New Haven..	159	54	213	112.5	150.7
Bridgeport...	94	53	147	84.4	131.9
Hartford....	114	45	159	108.9	151.9
Waterbury...	77	22	99	96.5	124.1
New Britain.	37	10	47	76.0	96.6
Whole State..	...	..	1,436	.....	122.0

A considerable part of the work of the office consists of the tabulation of the causes of death, and it is necessary for the sake of uniformity and comparability of the resulting statistics that it be done according to certain recognized standards. The method employed is that known as the International Classification of the causes of death, sometimes known as the Bertillon System. The use of a classification or statistical list is a condensation of the multitudinous terms employed by physicians upon certificates of death to a uniform list of fairly precise titles. This classification is now used by all registration States and many foreign countries. It is subject to revision periodically. The last revision was in Paris in 1909.

The registration officials of the various towns very generally take an interest in the work and strive to make the statistics as perfect as possible. To them we would express our appreciation, as well as to the physicians for their uniform courtesy in answering the many inquiries sent them for explanation or additional information regarding the causes of death.

A General Summary of the Births, Marriages and Deaths as Registered in 1913.

Births.

Sex.		Parentage.	
Males	15,385	American	9,557
Females	14,734	One or both Foreign	20,547
Not stated	3	Not stated	18
Total	30,122	Total	30,122

Whole number of Births	30,122
Birth-rate per 1,000	25.6

Marriages.

Both parties American	6,062
Both parties Foreign	4,564
Husband American, wife Foreign	792
Husband Foreign, wife American	1,119
Total Marriages	12,537
Total number of persons married	25,074

Deaths.

Sex.		Nativity.	
Males	9,562	American	12,345
Females	8,157	Foreign	5,114
Not stated	3	Not stated	263
Total	17,722	Total	17,722

Whole number of Deaths	17,722
Death-rate per 1,000	15.0

There was one birth to every	39.5	persons.
There was one marriage to every	93.8	"
There was one person married to every	46.9	"
There was one death to every	66.3	"

Towns in which the Deaths Exceeded the Births.

The registration of the Vital Statistics of the State is always conducted townwise. Although cities and boroughs are often included within town limits, their population for death-rates, birth-rates, etc., are counted as part of the population in which they are respectively located.

Digitized by Google

In 21 towns the deaths exceeded the births. The total excess of deaths over births in these towns, or the natural loss of population, was 83. The loss in this way was 61 less than in the previous year.

In 12 towns of less than 1,000 inhabitants the loss was	47
In 7 towns of between 1,000 and 2,000 inhabitants the loss was	24
In 1 town of between 2,000 and 3,000 inhabitants the loss was	5
In 1 town of between 3,000 and 4,000 inhabitants the loss was	7
Total	83

In 7 towns the births and deaths were equal, to wit: Bridgewater, Farmington, Granby, Madison, Morris, Scotland and Sherman.

In 140 towns the births exceeded the deaths.

The towns in which registration shows an excess of deaths over births are the following, arranged by counties:

Hartford County.

Town.	Population.	Deaths.	Births.	Loss.
Hartland	530	5	4	1

New London County.

Towns.	Population.	Deaths.	Births.	Loss.
East Lyme	1,940	40	36	4
Franklin	522	8	6	2
Lyme	745	11	5	6
Old Lyme	1,181	22	15	7
Voluntown	752	16	11	5
	5,140	97	73	24

Fairfield County.

Towns.	Population.	Deaths.	Births.	Loss.
Bethel	3,931	58	51	7
Monroe	990	12	10	2
Newtown	2,933	40	35	5
Trumbull	1,658	20	17	3
	9,512	130	113	17

Windham County.

Towns.	Population.	Deaths.	Births.	Loss.
Hampton	570	9	2	7
Woodstock	1,776	37	33	4

The following table gives a summary of the Vital Statistics of the State from 1848, the date of the first Registration Report, up to the present time. Previous to the year 1900 still births are enumerated with the living births—but in that year and following only the living births are counted in the total of births. In the year 1852 no Report of Vital Statistics was published.

TABLE I.

Vital Statistics from 1848 to 1913.

Year.	Births.	Birth-rate per 1,000.	Mar-riages.	Deaths.	Death-rate per 1,000.	Excess of Births over Deaths.	Divorces.	No. Mar-riages to each Divorce.
1848	6,850	20	2,816	4,379	12.4	2,471	...	....
1849	7,238	20	2,920	5,049	14	2,189	...	....
1850	7,578	20.4	2,884	5,170	14	2,408	...	....

BIRTHS, 1913.

There were registered during the year 1913 in the State of Connecticut 30,122 living births and 1,167 still-births. The latter are not counted in the enumeration of births.

As compared with the year before, there were 1,083 more living births and 27 more still-births reported.

The number of males registered was 15,385, of females 14,734.

The proportion of boys to girls was 104.4 to 100 against 106.0 the previous year.

Hartford County has the largest birth-rate, viz: 27.8 and the percentage of foreign born parents was 59.2.

Tolland County has the lowest birth-rate, 20.2.

Of New Haven County, 59.5 per cent. were of foreign born parents.

Of New London County, 42.4 per cent. were of foreign born parents.

Of Fairfield County, 56.8 per cent. were of foreign born parents.

Of Windham County, 36.6 per cent. were of foreign born parents.

Of Litchfield County, 47.2 per cent. were of foreign born parents.

Of Middlesex County, 56.5 per cent. were of foreign born parents.

Of Tolland County, 43.2 per cent. were of foreign born parents.

Of the State 55.8 per cent. were registered as both parents foreign born, and 31.6 per cent. of native parents; there were 12.3 per cent. of one native and one foreign born parent, while of .05 per cent. the nationality of parents was not stated.

The proportion of births to the whole population of the State (viz., 1,176 621) was 1 to 39.0 of the population, or 25.6 per thousand.

The town having the highest birth-rate is in New Haven County, namely Derby, 38.8 births per thousand of population.

The largest number of births in any one month occurred in August, 2,659; the smallest in February, 2,313.

The largest number of males were born in August, 1351; the largest number of females were born in August, 1,308.

In the first quarter of the year the birth rate was 25.1.

Digitized by Google

In the second quarter of the year the birth rate was 25.0.

In the third quarter of the year the birth rate was 26.3.

In the fourth quarter of the year the birth rate was 25.7.

In Hartford County the town having the highest birth-rate was Burlington, 38.5. Hartland had the lowest birth-rate, 7.5.

In New Haven County the town having the highest birth-rate was Derby, 38.8. Middlebury had the lowest, 11.5.

In New London County, Salem had the highest birth-rate, 29.5, and Lyme the lowest, 6.7.

In Fairfield County the town having the highest birth-rate was Bridgeport, 31.1. Easton and Monroe had the lowest, 10.1.

In Windham County the town having the highest birth-rate was Thompson, 31.0; the lowest in Hampton, 3.5.

Litchfield County's highest birth-rate was in Plymouth, 28.7 and the lowest was in Bethlehem, 3.6.

In Middlesex County, Saybrook took the lead, 30.6; and Westbrook was the lowest, 12.3.

In Tolland County, Union, 30.9; Andover, 8.1.

The registered number of still-births in the State was 1,167, which is one to every 25.8 of living births.

There were 639 males, 446 females, and 57 sex not stated; 7 males, 15 females and 3 sex not stated were colored.

MARRIAGES.

There were 12,537 marriages registered in the year 1913, being 307 more than in 1912.

This is one marriage to every 93.8 of the living population, or a marriage rate of 10.6 per 1,000, or 21.2 persons to 1,000.

The number of persons who were married in each County in 1913 was to every 1,000 of the population as follows:

Hartford County,	24.7	New Haven County,	19.5
New London County,	20.6	Fairfield County,	22.2
Windham County,	29.3	Litchfield County,	16.8
Middlesex County,	13.0	Tolland County,	14.4

It will be observed that Windham County shows the highest marriage rate, and Middlesex County the lowest.

The number of persons who were married in 1912 in each County was to every 1,000 of the population as follows:

Hartford County, 24.4; New Haven County, 19.0; New London County, 20.2; Fairfield County, 22.5; Windham County, 29.6; Litchfield County, 16.2; Middlesex County, 15.4; Tolland County, 14.8.

First Marriages and Re-marriages—The marriages of bachelors and spinsters constituted 88.4 of the total; those of widows and widowers, 11.3 per cent.; while in .02 per cent. the condition was not stated.

Of the males married in the year 1.5 per cent. were boys under 20 years old.

Of the females under 20 there were 9.1 per cent.

Table XXV exhibits more in detail the foregoing facts.

DEATHS.

The registered mortality in 1913 exclusive of still-births numbered 17,722, which was 407 more than in the preceding year.

Upon an estimated population, 1,176,621, the death-rate was 15.0 per 1,000 living population.

The deaths of males on record numbered 9,562; of females, 8,157. Sex not stated, 3.

The greatest mortality was registered in March, amounting to 1704. The smallest mortality was registered in October, amounting to 1,239.

The annual rates represented by the deaths in each quarter were as follows:

First quarter,	16.5	per 1,000	of living	population.....	4,865
Second "	14.7	"	"	.....	4,339
Third "	15.1	"	"	.....	4,455
Fourth "	13.8	"	"	.....	4,063
					17,722

The annual death-rate was 15.0.

DEATHS BY CLASSES.

The International Classification of the causes of death, formerly known as the Bertillon system, is employed by the U. S. Government and is now adopted in Connecticut, in common with the other States and cities which make a systematic registration of vital statistics.

From the causes of death as registered under the different classes the percentage of each was as follows:

From General Diseases.....	4,388	24.76
Nervous System.....	1,899	10.71
Circulatory System.....	2,448	13.80
Respiratory System.....	2,325	13.11
Digestive System.....	1,908	10.76
Genito-Urinary System.....	1,454	8.20
The Puerperal State.....	141	0.79
Skin and Cellular Tissue.....	96	0.54
Diseases of the Bones and of the Organs of Locomotion.....	31	0.17
Malformations.....	149	0.84
Diseases of Early Infancy.....	1,279	7.21
Old Age.....	226	1.27
Affections produced by External Causes.....	1,260	7.10
Ill-defined Diseases.....	118	0.66

Typhoid Fever was fatal in 131 instances during the year, which was 1 more than in the year before.

CONSUMPTION.

The number of deaths from pulmonary tuberculosis was 1,436 as compared with 1,409 in 1912 and 1,453 in 1911. The deaths from all forms of tuberculosis numbered 1,659.

The chart given below shows the general decline in the death rate from this disease during the past thirty years, and the tables on the following pages give the deaths by Ages and Sexes ; also the mortality in the State and various Counties since 1879.

CHART—Showing Deaths in Connecticut from Consumption per 10,000 Population for 30 Years, 1884–1913.
